

Never Skip A
Beat...

The B Care Cardiac Outpatient Management solution organizes data and associated workflows so that clinicians and administrative staff have the information they need, when they need it, in the form they need it, to more efficiently deliver optimal patient care.

The Challenge...

Many cardiac assessments, treatments, and procedures are now routinely provided on an outpatient basis. The workflows associated with these outpatient services are often complex and vary by the type of intervention. To further complicate matters, data is collected at a number of different points during each encounter using a variety of collection techniques. Orchestrating the flow of data, patients, and staff in this constantly changing environment presents many challenges.

Key Features

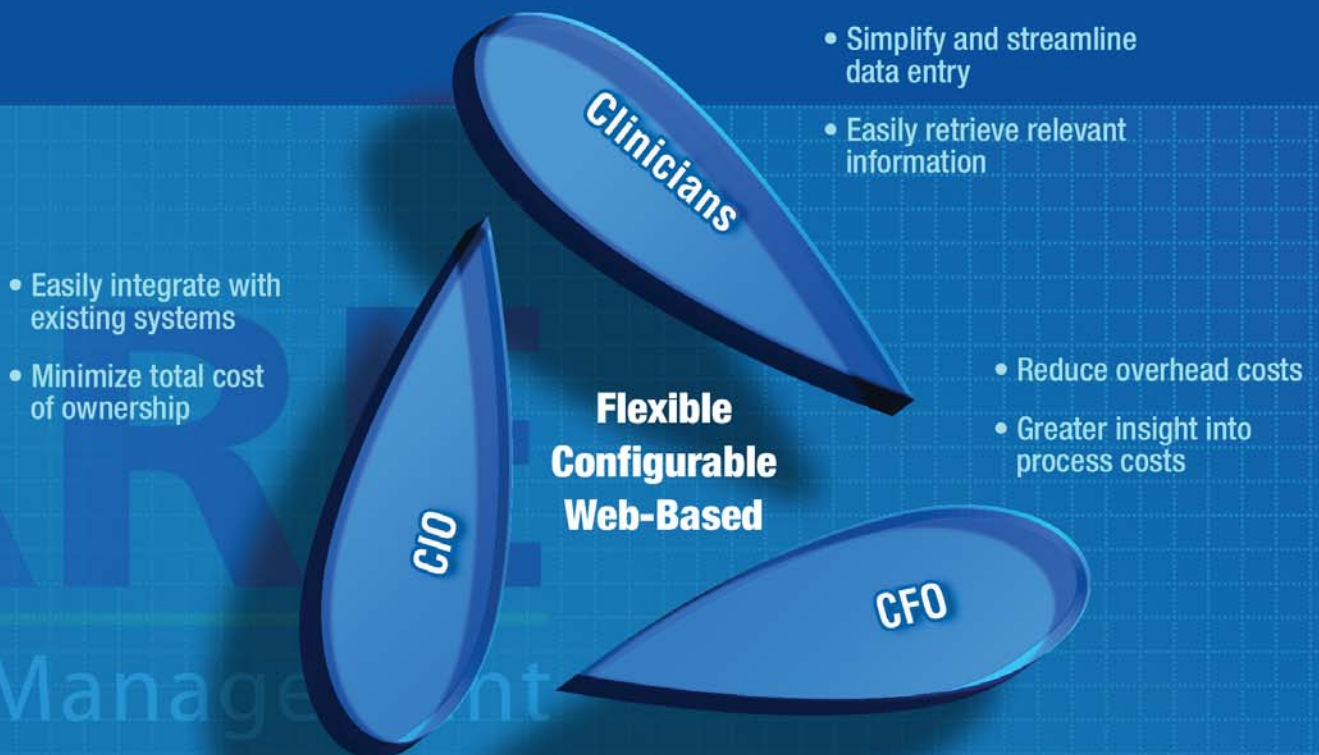

- **Supports cardiology specific workflows including:**
 - Clinic (A-FIB, Arrhythmia, Devices) & Procedures
 - Test Management
 - Patient Referral and Wait List Management
 - Billing
- **Scheduling and task management**
- **Device advisories and alerts**
- **Data sharing between assessments**
- **Ability to customize & create assessments/forms**
- **Communication with 3rd party devices and external systems**
- **Medication management**
- **Document management**
(auto generation of form letters)

Bridge the Gap...

While the typical hospital / clinical information system offers a good platform with which to digitize many healthcare processes, it frequently does not address the specific workflow and data handling needs of outpatient clinics and specialty units. Augmenting these systems, the B Care Cardiac Outpatient Management solution captures, organizes, and presents relevant health information about patients receiving cardiac care on an outpatient basis. In addition, the same solution handles many of the administrative tasks associated with booking patients and coordinating the availability of clinicians and the resources required to deliver outpatient cardiac care.

Benefits

For the clinical stakeholders, the B Care Cardiac Outpatient Management solution makes the task of information gathering, recording, and reporting simpler, less expensive, and easier to perform. Data stored in electronic form is readily shared, can be analyzed and displayed in ways not possible when stored in paper form, and is difficult to lose or misplace. Equally important, automating the workflows associated with cardiac procedures enhances clinical quality, aids compliance with evidence-based protocols, and eliminates many tedious and time consuming administrative tasks.

For the CIO and their staff, the B Care Cardiac Outpatient Management solution's open architecture and flexible, web-based platform is easily integrated with existing information systems and minimizes the total cost of ownership by eliminating the need to support client software on each workstation.

From the CFO's perspective, digitizing the cardiac care process increases the overall efficiency of the cardiology team while reducing the administrative costs associated with this process. In addition, data in an electronic format is much easier to analyze than data locked on paper forms. Rich reporting and analysis tools offer the CFO and their team an unprecedented ability to spot trends and better understand the underlying factors driving the costs associated with the delivery of cardiology services.

Finally, and perhaps most importantly, patients will notice a difference when the B Care Cardiology Outpatient Management is deployed. Benefits include enhanced patient safety through a reduction in errors and improved data quality and greater convenience through improved tracking and patient flow.

B CARE

Cardiac Outpatient Management

Health Solutions

B CARE is a robust and flexible platform for digitizing healthcare processes across the continuum of care that includes an integrated suite of point-of-care assessment, case management, and scheduling tools. As the basis for B Sharp's growing family of healthcare solutions, B CARE offers functionality that is common to most healthcare processes while, at the same time, providing tools to configure and tailor the data collection, workflow, and data sharing processes to meet sector and organization specific needs. By using a common platform to create solutions targeted at specific segments of the continuum of care, B Sharp is able to offer a wide variety of solutions at very affordable prices.

Reduce wait times by automating workflow

Enhance patient safety and quality of care by improving the flow of information inside and outside the organization

Accelerate adoption of health IT by offering clinically relevant interfaces and features.

B Sharp Technologies is a well-established Canadian health IT vendor specializing in solutions that digitize a variety of healthcare processes. Focused initially on developing solutions for the mental health community, B Sharp has continually evolved its flagship product, B Care, and is using this robust platform to develop an ever growing family of solutions which each digitize a specific healthcare process. B Care based solutions include an In-Patient Mental Health solution currently used to manage more than 40% of the in-patient beds in Ontario as well as Community Mental Health, Continuing Care, Long Term Care, Medication Management, Cardiac Outpatient Management, and Synoptic Reporting solutions.
